YOGURT SYSTEM — COMPLETE GUIDE

Homemade Yogurt + Frozen Yogurt Base v2 · & brew

PART 1 — HOMEMADE FULL-FAT YOGURT

Yogurt Full Fat Buatan Sendiri · Pots & Thermometer Method

Yield: **~1 litre** | **= 2 base batches** | Incubate: **6–10 hrs** | Hold temp: **40–45°C**

TWO TEMPERATURES THAT MATTER MOST · Dua Suhu Terpenting
82–85°C — heat milk, hold 5 min (thicker set + kills competing bacteria)
43–45°C — add starter (hotter kills cultures, cooler = slow set)

INGREDIENTS · BAHAN

Full fat fresh milk · Susu full fat	1000ml
Full cream milk powder · Susu bubuk full cream — now standard	30g
Plain yogurt starter (live cultures) · room temp	50g

Starter must have LIVE cultures. Plain unsweetened only — no sugar, no flavour, no gelatin. In Jakarta: Biokul, Heavenly Blush plain, or Greek Style plain.
Starter harus ada KULTUR HIDUP. Plain tanpa gula saja.

Save 50g for next batch — reusable 5–6 generations before buying fresh starter.
Simpan 50g untuk batch berikutnya — bisa dipakai 5–6 generasi.

Hygiene is everything. Sterilise pot, thermometer, whisk, jar with boiling water first. Competing bacteria ruins the batch.
Kebersihan adalah segalanya. Sterilkan semua alat dengan air mendidih dulu.

METHOD · CARA MEMBUAT

1. **STERILISE·Sterilkan**
   Pour boiling water over pot, thermometer, whisk, jar. / Siram air mendidih ke semua alat.
2. **STARTER TO ROOM TEMP·Starter ke Suhu Ruang**
   Take 50g starter out of fridge now. Cold starter slows the set. / Keluarkan starter dari kulkas sekarang.
3. **HEAT MILK 82–85°C, HOLD 5 MIN·Panaskan Susu**
   Whisk in milk powder. Heat stirring often. Hold 82–85°C for 5 min. / Kocok susu bubuk. Panaskan sambil diaduk. Tahan 82–85°C 5 menit.
4. **COOL TO 43–45°C ⚠·Dinginkan ke 43–45°C**
   Sit pot in cold water to speed up. Above 46°C kills cultures. / Rendam panci di air dingin. Di atas 46°C membunuh kultur.
5. **TEMPER STARTER·Campur Starter**
   Whisk 50g starter with 100ml warm milk until smooth. Pour back into pot, stir gently. / Kocok starter dengan 100ml susu hangat. Tuang kembali.
6. **INCUBATE 40–45°C·Inkubasi**
   Cover, wrap in towels. Oven with light ON (no heat) or cooler box with warm water jar. Do not move. / Tutup, bungkus handuk. Oven lampu nyala (tanpa panas).
7. **INCUBATE 6–10 HRS·Inkubasi 6–10 Jam**
   7–8 hrs ideal for frozen base — set + tangy. Longer = thicker + more tart. / 7–8 jam ideal untuk frozen base.
8. **CHILL + RESERVE·Dinginkan + Sisihkan**
   Refrigerate 4 hrs. Set aside 50g for next batch. / Simpan di kulkas 4 jam. Sisihkan 50g.
9. **READY·Siap**
   Pourable-thick, tangy. Use within 7 days. Weigh 550g per base batch. / Pourable, asam. Pakai dalam 7 hari.

PART 2 — FROZEN YOGURT BASE v2 · per 1kg batch

Frozen Yogurt Base v2 · 50% Real Yogurt · No Artificial Flavour or Colour

Yogurt: **50%** | Portions: **~22** | Straw-Ban: **42g** | All Berry: **55g** | Churn: **20–25 min** | Age: **8–12 hrs** | Store: **-18°C**

! GUMS INTO SUGAR FIRST — never directly into liquid. Sugar coats each particle = smooth gel, no lumps. / GUM ke GULA dulu — jangan langsung ke cairan.

! YOGURT BELOW 45°C ONLY — above kills live cultures. / YOGURT di bawah 45°C saja.

! AGE 8–12 HRS, MAX 16 HRS — set alarm. Over-ageing = too thick to churn. / SIMPAN 8–12 JAM, MAKS 16 JAM — set alarm.

INGREDIENTS · BAHAN · per 1kg

STABILISERS · PENSTABIL	
Xanthan gum	3g
Guar gum	3g
CMC	2g
SWEETENERS + BODY · PEMANIS + BODI	
White sugar · Gula putih	200g
Maltodextrin	30g
Glucose syrup 80° brix	126g
Fructose syrup	91g
WATER · AIR	
Water — warm 55–60°C · Air hangat	100ml
Water — cold · Air dingin	128ml
DAIRY · SUSU	
Homemade full-fat yogurt · Yogurt	550g
Skim milk powder — removed — now in yogurt	×
ACID REGULATORS · PENGATUR ASAM	
Citric acid · Asam sitrat	0.8g
Lactic acid · Asam laktat	1.5g
TOTAL	**~1000g ✓**

Skim milk powder removed — the full cream milk powder is now in the homemade yogurt instead (Part 1). Same total milk solids, moved upstream, richer flavour. Cold water increased to 128ml to compensate.
Susu skim dihapus — susu bubuk full cream sekarang di yogurt (Part 1). Air dingin jadi 128ml.

PRODUCTION STEPS · LANGKAH PRODUKSI

1. **PRE-MIX GUMS INTO SUGAR·Campur Gum ke Gula**
   Whisk xanthan (3g) + guar (3g) + CMC (2g) into white sugar (200g) + maltodextrin (30g). Zero dry clumps. / Kocok gum + CMC ke gula + maltodextrin.
2. **HYDRATE IN WARM WATER 3–4 MIN·Hidrasi di Air Hangat**
   Warm 100ml water 55–60°C. Pour gum-sugar mix in, whisk high 3–4 min. / Panaskan 100ml air, tuang campuran gum, kocok 3–4 menit.
3. **ADD COLD WATER·Tambah Air Dingin**
   Pour 128ml cold water while stirring. Cools base fast toward 45°C. / Tuang 128ml air dingin sambil diaduk.
4. **ADD GLUCOSE + FRUCTOSE·Tambah Sirup**
   Glucose (126g) then fructose (91g), one at a time. Weigh on scale. / Glukosa (126g) lalu fruktosa (91g).
5. **FOLD IN YOGURT — BELOW 45°C ⚠·Masukkan Yogurt**
   Confirm below 45°C. Fold in 550g yogurt. Hand blend 2 min until smooth. / Pastikan di bawah 45°C. Masukkan 550g yogurt. Blender 2 menit.
6. **ADD ACIDS — COLD ONLY ⚠·Tambah Asam Saat Dingin**
   Citric (0.8g) + lactic (1.5g). Blend 30 sec. Very tangy + sweet = correct. / Asam sitrat (0.8g) + laktat (1.5g). Blender 30 detik.
7. **4x DILUTION TASTE TEST ⚠·Tes Dilusi 4x**
   1 tbsp base + 4 tbsp apple juice. Taste before ageing. Bland = add 0.2g lactic. / 1 sdm base + 4 sdm jus apel. Cicipi sebelum disimpan.
8. **AGE 8–12 HRS — SET ALARM ⚠·Simpan 8–12 Jam**
   Label date + make time + use-by. Max 16 hrs. / Label tanggal + jam buat + jam pakai. Maks 16 jam.
9. **CHURN BQ12T 20–25 MIN·Putar**
   Should churn smoothly. Struggling = reduce xanthan 0.5g next batch. Transfer to GREEN container. / Harus lancar. Berat = kurangi xanthan 0.5g.
10. **FREEZE + PORTION·Bekukan + Bagi**
    -18°C min 4 hrs. Scoop 42g Straw-Ban, 55g All Berry. / -18°C min 4 jam. Scoop 42g + 55g.
11. **BAR BLEND ORDER·Urutan Blender**
    Juice → fruit → base → ice. Blend 20–25 sec. Check cup: clean = ✓ no jelly film. / Jus → buah → base → es. Cek cangkir bersih = ✓.
